

MR001 Connection Diagram

The standard MR001 configuration has R/C channels 1 to 5 on pins 1 to 5. When used with a Micron transmitter, P1/chan1 is regulator and P3/chan3 is direction control. Pins 6 & 7 may be used for front and rear LED lighting which is automatically switched – see the MR001 manual for details.

The battery must provide at least 3.5V under load. 5 NiMH cells is recommended but 4 cells is OK provided that they hold their voltage under load.
